

VACUMATIC®

Vacuum Technology

With Vacumatic vacuum technology, you can guarantee hygienic waste disposal, while facilitating a pleasant living and working environment.

The Vacumatic Technology

Vacumatic technology removes the air from waste bags and then hermetically seals them removing the problem of exposed bacteria, viruses and unpleasant odors. The Vacumatic system provides a hygienic, easy to operate solution to bad odor in health care facilities.

The patented bags that are used in the Vacumatic system have a strong wall structure which prevents leakage of air or liquid after sealing. They are available in clear or yellow & black 'tiger' bags.

The Vacumatic system aids collection, storage and transportation of incontinence and other clinical waste in a safe, easy to operate and economical way.

If your facility relies on incontinence products, Vacumatic allows you to dispose of waste quickly, easily and hygienically.

The Vacumatic system comprises of multiple collection trolleys and a central vacuum unit which once each special bag is full, it will be compressed and heat sealed to prevent spillage or odor escape.

Benefits

- Hands free operation reducing the risk of cross-contamination
- Suitable for use in combination with all types of incontinence products
- Unit is fitted with bacteria and odor filters for the protection of staff and the environment
- The strong Vacumatic bags negate the risk of splitting during movement to outside garbage areas and reduces odor whilst waiting for collection
- Plugs into standard electric wall socket

DDC
DOLPHIN

VACUUM SEALER
By placing the vacuum bag into the machine the air is extracted from the bag, and then hermetically sealed using a heating element.

VACUUM BAG
The sturdy vacuum bags which are 0.004-inch thick are odorless and airtight once sealed

AIR FILTERS
The air drawn from the vacuum bag is filtered through a bacterial filter, then through an odor filter.

EASY TO LOCATE
The Vacumatic is mobile and easy to move.

ACTIVATION SENSOR
The Vacumatic is opened by simply moving the foot under the light sensor. This allows it to be operated hands-free. The process is completely safe and automatic.

Vacumatic Trolley

The Vacumatic Trolley has been specifically designed as part of the Vacumatic waste disposal system.

The Vacumatic Trolley uses a unique rubber clamping system operated by a foot pedal which opens the clamp spring top and closes automatically when the foot is removed. This means that the waste bag is never left open, preventing any bad odors from escaping, keeping your facility completely safe, efficient and odor free.
